Renewable energy sources

Hunguest Hotels Sun Resort – Herceg Novi, Montenegro

Duration of construction: 2005-2007.

Our activities: general planning and delivery in consortium with Samo Doo

The heating-cooling energy source, and the hot water used for utility purposes is basically provided by a heat-pump utilizing the energy of the seawater, which, in the case of the hot water used for utility purposes is supplemented by the support of solar collectors.

„The sequence of areas observed by the eyes and the mind” – Pilisszentkereszt és Dobogókő

Date of planning: 2007.

Our activities: Feasibility study

According to the plans, the heating-cooling energy source, and the hot water used for utility purposes is going to be provided by the heat of the soil, in other words by geothermal energy.

A considerable part of the electric power-supply is provided by solar cells and the recycling of wood waste. Waste-water is treated in a separate waste water treatment plant using biological methods.

Hotel Salvus Spa- and Sports-hotel – Bükkszék

Beginning of construction: 2006-

Our activities: general planning

The heating-cooling energy source, and the hot water used for utility purposes is provided by heat-pumps utilizing thermal energy with the help of 60 borings equipped with soil samplers.

Waste-water is treated in a separate waste water treatment plant, using biological methods.
